

MOMS ACROSS AMERICA MOVEMENT

Championing policy and public servants that put children health, safety, and America's future FIRST.

VACCINES

We mothers call on our elected officials to make decisions based on the health and safety of our children and the future of America.

Bills we support:

- ★ Rep. Gosar's End the Vaccine Carve Out Act ([H.R. 4668](#))
- ★ Sen. Lee's GRACE ACT ([S.5128](#))
- ★ Rep. Roy's LIABLE Act ([H.R. 1432](#))

Join the 304 elected officials who have taken the pledge, [sign the pledge](#) to protect health and informed consent

Problems we face:

- Vaccine mandates prevent our healthy children from attending school and sports clubs, discriminating against them when their genetics and religious preferences justify their parents' choices.
- None of the vaccines currently on the CDC recommended schedule have been saline placebo safety tested in trials, they have only been compared to other vaccines.
- Most vaccines have efficacy and safety trials of only 4-5 days long, not sufficient for assessing harm that often happens 2 weeks to 2 years later.
- 40-60% of American have the MTFHR or other gene variants that impair a person's ability to detox. Vaccines with up to 500 mcg of aluminum, as well as mercury, polysorbate 80, polyethylene glycol and/or the contaminant glyphosate, can and has harmed and killed our babies and children.
- The 1986 Vaccine Safety Act gave immunity to vaccine manufacturers from lawsuits and being held accountable for safety. Therefore they do not take the safety precautions that are available.

Solutions:

We call on elected officials to require double blind, saline placebo control studies for all vaccine trials, and report results transparently. Please support bills that improve vaccine safety and protect parental rights.
